

Your valuable participation can improve CVAD practice for paediatric cancer patients

Are you a clinician usually involved in CVAD practice in the paediatric cancer setting? We need your valuable participation.

Why are we doing this study?

This research aims to explore current CVAD selection, insertion, management, removal, and complication management practices in paediatric cancer care. The information you will give us will help to understand the current situation and identify the variations in usual practice for future management changes.

What does participation involve?

The survey involves answering about 40 questions about your practice and CVAD management. Completing the survey could take around 20 minutes.

How to Participate?
